ABOUT FORTREND

Founded in 1979 in Silicon Valley, USA, Fortrend has always been the top leader in batchwafer transfer technologies, Standard Mechanical Interface (SMIF) technologies, ultra-cleanautomation solutions, and wafer surface curing processes for the semiconductor and PV industries. Fortrend SMIF products have become the crucial automation connections between process equipment and the factory delivery system and between different processing equipment.

Fortrend's standard 200mm and 300mm front end automation modules are readily integrated into processing tools reliably and cost effectively. Fortrend's 3DIC thermal curing tools set the industrial standards for wafer surface curing processes. Fortrend offers not only standard automation and thermal curing modules, but also custom solutions allowing us to meet custom challenges and difficult configuration requirements quickly with a minimum of expenses. Contact Fortrend and experience our engineering excellence first hand.

Regarding the SORTER/EFEM Equipment

Wafer sorting equipment (Sorter) and Equipment Front End Module (EFEM) are crucial components in the manufacturing and testing of integrated circuits, widely used in semiconductor manufacturing and inspection processes. They are one of the core modules that enable automated production and process workflows. Currently, the domestic market penetration rate is less than 50%. The company has now achieved full in-house development and mass production of first-tier Sorter/EFEM modules, overcoming several core technological challenges, and holds proprietary intellectual property rights. Moreover, it is capable of meeting customers' high-end customized requirements.

Fortrend has established nearly 18 local customer service centers in the East China, North China, South China, and Southwest regions. Professional technical support engineers provide after-sales service with the fastest response time of 2-4 hours to arrive on site.

During the installation period, free on-site training is provided for the customer's engineers.

A 1-year labor protection and parts warranty is offered, along with free software upgrade services (1-year free software upgrades) for the existing software installed at the customer's factory.

WAFER SORTER

High Cleanliness

High Compatibility

High Capacity

- ◆ Wafer thickness support: 100 - 1500μm
- ◆ SECS/GEM
- ◆ Workstations 2 to 8 are optional
- ◆ Safety curtain
- ◆ Supports the transportation of wafers of various sizes
- ◆ OCR (top or bottom)
- ◆ Various feeding methods are available
- ◆ N2 purge LP
- ◆ Compact design

Specification parameter

- ◆ Fortrend wafer sorters are mainly used for wafer transfer, sorting, and merging operations, and can compatible with wafers ranging from 3" to 12".
- ◆ Adopting a modular design, the internal cleanliness can achieve ISO Class 1, and it can accommodate wafers of various sizes and types. It features independent integrity, high cleanliness, high compatibility, and other characteristics.
- ◆ It is compatible with all SEMI-standard FOUP (Front Opening Unified Pods), FOSB (Full Open Shuttle Bays), SMIF POD (Standard Mechanical InterFace Pods), and Cassette .
- ◆ Highly advantageous COO and COC help customers reduce costs and increase efficiency.

Specification parameter	
Rated voltage	Phase AC 220V 50/60 Hz
Rated power	3.52kW(Decide by config)
Comm interface	RJ45
Comm protocol	ASCI/HEX/HSMS&SECS 1I
Software	Fortrend independently developed software
Cleanliness	ISO 14644-1 class 1 / ISO class 3
WPH	≥700 (Without Aligner and OCR) ≥300 (With Aligner and OCR)
Uptime	≥99%
MTBF	≥4000 hours
MTTR	≤2 hours
MTBA	>100 hours
MTTA	<10 hours
Wafer Breakage Rate	≤1/1,000,000
OCR Accuracy Rate for Bare Wafers	≥99.8%
Repeatability of Positioning Accuracy	±0.1mm

Wafer Sorter Standardized product series

Centralized Stage

Sorter Standardized(Dual-sided Multi-station)

-  Integrated layout
-  Agile design
-  High throughput

- ◆ The dual-sided multi-station wafer sorting equipment is designed with wafer carriers on both sides of the frame. This design not only meets various loading and docking requirements but also provides a compact layout, reducing the equipment footprint and improving the utilization rate of the facility space.
- ◆ Double measurement two-station equipment dimensions: 1650mm (Length) × 1662mm (Width) × 1886mm (Height).

Case Presentation

Sorter Customized(Taiko Wafer)

-  Customized Solutions
-  Special Wafer Processing
-  Support Lifting/
Bernoulli Fingers

Reversing Mechanism

Edge-grip type Aligner

Clamp type/Contact Bernoulli

- ◆ The Taiko Wafer Sorter minimally supports 6-inch, 8-inch, and 12-inch wafers with a minimum dimension of 50μm. It supports lifting/Bernoulli pick-and-place methods and provides a high-precision alignment and flipping mechanism.

Case Presentation

Sorter Customized(OM loader)

-  Dexterous Design
-  Paired with a fully automated microscope
-  Equipped with macro/ microscopic inspection capabilities

◆ The OM Loader Sorter is designed for multi - size wafer handling (6", 8", 12"). It supports mapping before wafer loading into the chamber and is compatible with various wafer transfer, sorting, and merging. It performs wafer scanning, alignment, sorting, batching, and reading wafer IDs in a micro - environment. Additionally, it enables semi - automatic and manual wafer surface inspection on both the micro - and macro - inspection platforms.

Case Presentation

Sorter Customized(Packaging Machine)

-  Integrated design
-  Applied to automated packaging
-  Capable of supporting cake box shipping packaging

◆ The packaging machine can automatically complete the wafer packaging process, supporting various wafer box formats (Foup/Smif Pod/cassette to Coin Stack Box), and is suitable for 6-inch, 8-inch, and 12-inch wafers and Taiko Wafer.

Case Presentation

WAFER EFEM

-  High Cleanliness
-  High Compatibility
-  High Capacity

- ♦ Wafer thickness support: 100 - 1500μm

♦ SECS/GEM
- ♦ Workstations 2 to 8 are optional

♦ Light curtain
- ♦ Supports the transportation of wafers of various sizes

♦ OCR (top or bottom)
- ♦ Various feeding methods are available

♦ N2 purge LP
- ♦ Interface with multiple process equipment

Specification parameter

- ♦ Fortrend equipment front - end modules are mainly designed to meet customized process requirements and are compatible with wafers ranging from 3" to 12".
- ♦ The internal cleanliness of the equipment can reach ISO Class 1, and it can adapt to wafers of different sizes and types, featuring high cleanliness, high compatibility, and other characteristics;
- ♦ It is compatible with all SEMI-standard FOUP, FOSB, SMIF POD, and Cassette.

EFEM Customized(Interface with Measurement Process)

- High Precision
- High Cleanness
- High Stability

◆ EFEM for interfacing with metrology process equipment typically come equipped with high-precision edge finders and code readers. They are widely used in devices such as metrology, AOI , and CD-SEM . In the context of interfacing with immersion metrology processes, they can be configured with air knives, humid robot, and drying modules to perform functions such as wafer air drying and cooling, as well as surface cleaning.

Case Presentation

EFEM Customized(Interface with Ion Implantation Process)

- High Cleanliness
- Modular design
- High stability

◆ The ion implantation process equipment EFEM can be equipped with wafer box storage functions, and can be interfaced with overhead cranes or manual loading. It is configured with FOUN storage positions and FOUN Robots. Typically, it features dual Robots for wafer transfer to increase production capacity. It can also be configured with a 1+5 Robot setup, supporting the simultaneous pick-up and placement of five wafers.

Case Presentation

EFEM Customized(Epitaxial)

-  High integration
-  Modular performance
-  High stability

Merge and Split Module

Grinding Stone Cassette

Cleaning Module

◆ The front-end automation module for epitaxy processes includes a graphite plate/ring merging and splitting module, a grinding plate Cassette, a cleaning module, a wafer flying detection module, and a grinding plate edge-finding module, interfacing with the vacuum transfer chamber (VTM).

Case Presentation

EFEM Customized(Interface with PVD / CVD / ETCH)

-  High Cleanliness
-  Modular design
-  High efficiency

Wafer Buffer Module.

Single-Arm Dual-Fork Robot

EFEM+VTM

◆ The front-end automation module for PVD/CVD/ETCH processes is typically equipped with a high-speed single-arm dual-fork robot to enhance productivity. It also includes a wafer buffer mechanism and can be integrated with a vacuum transfer module (VTM).

Case Presentation

EFEM Customized(Interface with Lithography Process)

-  compatible with the low material input port of the lithography machine
-  Dual Robots
-  Capable of independently interfacing with a photolithography machine

Photolithography Machine Docking Interface

ROBOT

Lithography Machine Docking Robot

- ◆ Independent front-end automated transfer module for direct docking with photolithography machines: It enables direct connection with the photolithography machine for automatic loading and unloading. The robotic arm is adaptable for transferring wafers from the wafer cassette to the photolithography machine's docking window. Equipped with dual robots: a standard robot and a small Z-axis robot, it offers transfer solutions for wafers of various sizes (6"/8"/12"). The small Z-axis robot meets the transfer requirements for docking platforms with heights ranging from 620mm to 800mm.

Case Presentation

EFEM Customized(Interface with CMP / Bonding Process)

-  High Cleanliness
-  Long-term stability
-  High compatibility

Large Z-axis Robot

Dual-Flip Robot with Large Z-axis and Large X-axis

- ◆ Interface with CMP and Bonding processes: Solutions that integrate EFEM with process robots can be provided. Process robots can be configured with large Z-axis robots and large Z-axis, large X-axis dual-rotation robots. For the CMP process, they can also be matched with Wet Robot and drying modules.

Case Presentation

EFEM Customized(Frame wafer)

-  High Cleanliness
-  High Compatibility
-  Independently Developed Alignment Module

◆ The Frame EFEM supports both Frame Wafer Loadport and Open Cassette Stage wafer loading systems. It is compatible with 4" - 12" frame wafers and can be equipped with our self - developed high - precision alignment mechanisms. The mechanical arms can be either clamping type or vacuum - suction type. Additionally, it can also meet the compatibility requirements between frame wafers and regular wafers.

Case Presentation

Core Module150mm/200MM LOADPORT

-  High Versatility
High Compatibility
-  Customization
-  High Compatibility

Standard Load Port Universal equipment , fully compliant with SEMI standards, with high versatility, high compatibility.

Loading type: SMIF POD is compatible with 6" and 8" wafers.

Built-in original factory mapping system enables the detection of overlapping, skewed, and protruding wafers, effectively preventing wafer collisions during integrated wafer transportation.

Optional multiple types of code reading are available: RFID/Smart Tag.

Optional customization components are available: Info Pad Sensor; E84 interface; Adapter to implement the open cassette loading method, flexibly meeting various working condition requirements.

◆ PLM is a mature wafer opener that is equipped with sensors compatible with both 6-inch and 8-inch wafer unpacking and inspection, capable of accurately detecting the status of wafers in POD boxes. PLM can interface with a variety of equipment, and its rich selection of optional features provides more solutions for customer production line upgrades.

Case Presentation

Outer dimensions	L: 432mm W: 422mm H: 772mm	Cleanliness	Class I @ 0.1um
Communication interface	Serial EIA-RS232C,Paralle I/O	Rated voltage	DC 24 V
Main material	Aluminum alloy, Stainless steel (SUS 304)	Rated voltage	60 W
Optional features	ID reading and writing device with optional RFID module or IR Link	Comm protocol	HEX, SECS

Core Module (300mm LoadPort)

-  Self-Developed
-  Compliant with SEMI Standards
-  High Versatility
High Compatibility

300mm LoadPort

Full-scale production autonomy and proprietary patents for core components.

The key structures and designs of the 300mm LoadPort are all independently patented by Fortrend, and both the design and production are carried out within Fortrend's own production base. Integration of hardware and software ensures the standardization and consistency of the equipment.

Hardware and software design compliant with SEMI standards and universal specifications.

The complete machine is designed and manufactured in accordance with SEMI standards, using the RS-232 HEX communication protocol for communication with interfacing equipment. It is also expandable with various communication and interfacing methods.

Diversified functional configuration options, suitable for a variety of working conditions.

The original Wafer Mapping system utilizes proprietary advanced control algorithms to enable detection of wafer presence, absence, stacking, and tilting. Optional functions such as the E84 communication protocol and N2 purge can meet various on-site requirements.

Specification parameter

Outer dimensions	L: 586mm W: 472mm H: 1349mm	Equipment weight	It varies depending on the configuration
Rated power	144W	Rated voltage	DC 24 V
Communication mode	Serial RS-232C, parallel I/O	Rated voltage	6 A
Optional features	AMHS Communication Port (E84)	Comm protocol	HEX, SECS

Core Module(Wafer Pre-Aligner)

Self-Developed

Customization

High Versatility
High Compatibility

Efficient operation, locating the wafer notch position in less than 7 seconds (excluding the time for wafer handling), quickly completing the correction of the wafer center and angle.

It supports both translucent and opaque wafer applications, suitable for silicon wafers and silicon carbide wafers with diameters ranging from 150 to 300mm.

Integrated design with a built-in controller, eliminating the need for an additional controller and wiring space, achieving an ultra-compact size.

The system is equipped with real-time monitoring capabilities, allowing for the live detection of the status of motor drive control systems, vacuum systems, detection systems, and circulation systems.

♦ The FPA series wafer edge finder is a four-axis controlled device that uses a miniature single-axis robotic module, characterized by high rigidity and small size. It achieves high-speed, efficient, and high-precision wafer edge detection and center position calibration. (Wafer position $\leq \pm 0.1\text{mm}$; Wafer notch/flat $\leq \pm 0.1^\circ$)

Centralized Stage

- Compatible with 6, 8, and 12-inch Frame rings.
- Capable of configuring QR code reading functionality.
- Repeat positioning accuracy $\leq \pm 0.1\text{mm}$, rotation angle $\leq \pm 0.1^\circ$.
- Adjustment time < 6 seconds.
- Maximum initial offset $\pm 7\text{mm}$.

Three-stage Integration Plan

- The equipment front end can optionally be equipped with an EFEM or SMIF, The EFEM is available in both standard and customized types;
- The Load Lock is available with different structures and transfer methods;
- Customized transfer chambers can be designed to meet the specific requirements of the process chambers;
- Vacuum robots can be selected in different models and end effectors based on actual operating conditions;
- The transfer chamber and Load Lock can be optionally equipped with built-in modules for orientation, cooling, and preheating.
- Optional AWC (Automatic Wafer Centering) function, Buffer function, and wafer storage module.
